Healthcare Management Platform, oneSOURCE, Connects Dental Industry with Databases to Promote Infection Control and Sterile Processing

Seeking to provide dental offices with resources for consistent sterilization procedures, oneSOURCE focuses on providing access to comprehensive database of manuals and IFUs

SALT LAKE CITY, UTAH (June 24, 2020) - In an effort to keep dental patients and staff as safe as possible amid COVID-19, [oneSOURCE](#), a leading healthcare management solution, aims to help increase infection control and regulation among the dental market. This will be achieved by creating greater access to the proper manuals and instructions for use (IFUs) needed to be in compliance with oversight agencies such as Occupational Safety and Health Administration (OSHA), Centers for Disease Control and Prevention (CDC) and American Dental Association (ADA) and more.

“oneSOURCE found a unique need for our platform in the dental community, as there is a lack of uniform regulations in the industry for sterilization processes and overall standard operating procedures,” said Jack Speer, co-founder and president of oneSOURCE. “By providing 24/7 access to dental offices, we hope to better equip this segment of the medical field with the tools they need to offer the highest quality patient care and instill patient confidence as facilities begin to reopen. The Dental Database features some of the most critical manufacturer materials such as the OSHA-mandated Safety Data Sheets (SDS).”

IFUs for dental instruments, equipment and consumables are included in the platform, offering facilities access to any resource needed to provide superior patient care. The database boasts nearly 100,000 searchable catalog numbers for IFUs ranging from dental curing lights to dental headpieces and implants. Current oneSOURCE dental customers include U.S. military facilities, Veteran Affairs facilities, Office of the Surgeon General, dental facilities within the Mayo Clinic hospital system, Indian Health Service, and university-system dental schools.

“As a dental practice consultant with over 20 years of experience in helping offices mitigate exposure and stay in compliance, oneSOURCE’s commitment to furnishing healthcare professionals with the tools they need for success is truly invaluable,” said Mary Beth O’Brien, owner and president of Office Based Surgery Consultants, and consultant to oneSOURCE. “Dental office oversight is not as stringent as hospitals so post COVID-19, dentists must embrace new thinking, fresh attitudes and be willing to alter the way they work. By discussing the importance of using IFUs and integrating them into standard operating procedures, facilities will be better prepared to have efficient, effective and measurable programs.”

Providing proper tools for healthcare facilities to achieve the highest level of patient safety is oneSOURCE’s top priority, and is emphasized with this new found focus on a market that requires the utmost attention to detail in order to mitigate community spread.
